Cover: The map illustrates tuberculosis case rates in 1997. Eighteen states have tuberculosis case rates ≤ 3.5 cases per 100,000 population, the interim goal for the year 2000 established by the Advisory Committee (Council) for the Elimination of Tuberculosis (*MMWR* 1989;38[No.S-3]:1). Fifteen states and the District of Columbia have tuberculosis case rates that are higher than the 1997 national rate of 7.4 cases per 100,000 population.
